Spell checker is a python program. It takes an txt dictionary file and a txt file that you want to check, then it returns a txt file output that contains the wrong spelled words.

 It takes 3 arguments and write an output file.

The first argument is the txt dictionary path.

The second argument is the txt file you want to check.

The third argument is the output path of the txt file.

Command line example:

python main.py dictionary.txt persuation.txt output.txt
